### Description

Water-jet cutting is used to shape natural stone into custom shapes and designs. Intricate details can be cut through natural stone to create custom shapes and intricate mosaic tile. Water-jet cutting is as (if not more) powerful than traditional laser cutting devices. The water jet has the ability to create intricate detail with the utmost accuracy to produce different results. The details may be subtle to transform smooth, earthy stone to appear as though it has a linen textured finish. On a larger scale, the natural stone may be cut into many different shapes and details to create sculptures and large-scale art installations.
